

# **SKIRE** PROJECT PORTFOLIO MANAGEMENT SOLUTIONS

## Enhance Your Existing Processes

Skire solutions are the only PPM solutions that easily map to your existing business processes, allowing you to accommodate business change while supporting business controls and process parameters. With Skire, take advantage of best practices or create your own workflows. Unify resource tracking for budgets, employees, and contractors. And easily analyze today's projects and tomorrow's needs. We believe PPM solutions should support the way you already work.

## Align with Enterprise Goals. Easily.

Supporting organizational strategies is easier when you can review progress and prioritize needs at a moment's notice. Skire PPM solutions deliver visibility across your IT portfolio with instant drill-down into specific resource and asset availability. Roll data up into reports that communicate exactly how projects support initiatives, and show how initiatives are supporting enterprise goals.

## Strengthen Cost Controls

Strong cost controls help ensure that projects stay on track. Skire PPM solutions are known for exceptional cost control capabilities. With Skire, you can immediately see where existing resources and development work can be leveraged for multiple projects. Ensure that work is done with documented approvals. And accurately track project work to different budgets or funding sources for full accountability.

## Manage Every Resource

All projects compete for resources—both human and infrastructure. Skire delivers accurate data for allocating resources and tracking their impact against every project. Now it's easy to aggregate external resource requirements for planning and project prioritization. You can substantiate budget requests with actual infrastructure and human resource data. And you'll be able to easily manage cost, schedule and scope, and deliver more successful projects.

### The Platform for Integrated Management

Unifier™ is a powerful business process automation platform for Project Portfolio Management.
